

INSTALLATION INSTRUCTIONS

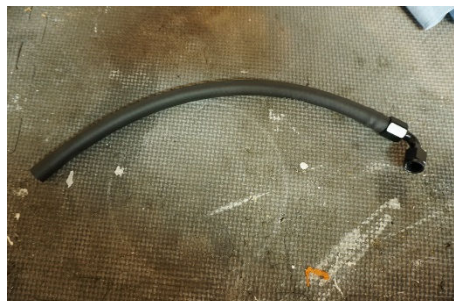

OIL CATCH CAN KIT

1999-2007 GM/CHEVY TRUCK

Document: 19-0115
Support: info@radiumauto.com

This catch can kit is designed for the 1999-2007 GMC Sierra/Chevrolet Silverado with Vortec engines. Read and understand all steps before beginning the installation process. Installation should take about 1/2 hour.

STEP	TOOLS NEEDED	INSTRUCTIONS	PHOTO
1	8mm nut driver	Remove the engine cover by loosening the hold-down bolt and lifting the front of the cover up and outward.	
2		On the left side (drivers side) of the engine, find the PCV tube which runs from the top of the intake manifold to the back of the engine. It is a black, hard plastic tube and may or may not have a rubber or foam cover.	
3		Disconnect the tube from the barbed fitting on the intake manifold. Disconnect the other end from the fitting back behind the cylinder head. Remove the tube from the vehicle.	
4	10mm Socket	Remove the two nuts for the grounding cables located on the firewall near the brake booster. Keep the nuts, they will be reused.	

5	4mm Allen Wrench	<p>Prepare the Radium catch can by installing the adapter fittings into the ports. Lubricate the O-rings with oil before tightening them down. Also install the mounting bracket as shown using the provided screws.</p>	
	1-1/8" Wrench		
6	10mm Socket	<p>Install the catch can and bracket on to the mounting studs on the firewall with the grounding cables underneath the bracket. Re-install the nuts and tighten. CAUTION: Do not over-tighten these nuts or grounding studs may become damaged!</p>	
7	Hose Cutter	<p>Prepare the first hose by cutting a piece to 14.5" and pressing in the 90-degree hose end. Use a small amount of lubrication on the hose barbs to help get the hose fully seated on the hose end.</p>	
8		<p>Screw the hose end on to the top fitting of the catch can, do not tighten yet. Route the other end of the hose to the fitting on the back of the engine where the OEM PCV tube attached. Push the hose on to the fitting, a clamp is not needed.</p>	
9	11/16 wrench	<p>Make sure the hose is routed in a way that it does not chafe anything then tighten the hose end nut using a non-marring wrench. Hold the catch can while tightening, to avoid over-stressing the bracket and mounting studs.</p>	
10	Hose Cutter	<p>Prepare the second hose by cutting to 11.25" and installing the straight hose end.</p>	

11		Push the open end of the hose on to the fitting on the top of the intake manifold. A hose clamp is not needed.	
12	11/16 Wrench	Screw the other end of the hose on to the catch can side fitting and tighten with a wrench. Support the catch can while tightening to avoid over stressing the bracket and mounting studs.	
13	8mm nut driver	Reinstall the engine cover. Installation is complete. Periodically check the catch can contents using the dipstick, or by unscrewing the lower portion of the catch can. Empty and clean as needed.
